

CS212 Program 5 – Grading Sheet

Name: Ben DeWeerd Date/time: 12.06.2021 Is this program late? No

Parts of the program I didn't get to work correctly:

I was able to implement everything, including alpha-beta pruning. I would have liked to train it against itself automatically (rather than manually) to perfect heuristic weights but I ran out of time.

Comments:

This was a really fun project! I enjoyed applying what we've learned to solve fun problems like this.

_____ [below the line for instructor use only] _____

Submit a program that compiles and runs, including DLL and pic (50%) _____

Minimax search (20%) _____

Staged DFS respecting time limit (10%) _____

Evaluation function measures at least 3 features of the board (10%) _____

Alpha-beta pruning with move reordering (10%) _____

Style (10%) _____

Total: _____
